

From first clip to *coaching report*.

Everything in one place: how to film your practice, get live AI coaching with the Visual Coach, run a deep swing analysis, and export a PDF report — step by step.

01 Get the app *ready*.

Install the right app: [AI Tennis Swing Coach](#) by NovaDev Code Studio — the dark blue icon with the tennis ball. (Other apps use similar names; use this exact link.)

No sign-up needed to start — the Visual Coach works the moment the app opens, free and unlimited. The deep AI analysis needs a one-tap Sign in with Apple so your free credits stay attached to you.

Have a Pro or promo code? Profile → Manage Pro → "Have a code?" — enter it once and Pro unlocks permanently on your Apple ID.

Coaching more than one player? Profile → Player profiles keeps training plans, history, and progress separate for you, family, friends, or students.

Profile tab · Apple sign-in, AI credits, subscriptions — and player profiles so each person keeps their own training plan and history.

02 Film your *practice*.

- **Side view is best** — put your phone on a tripod or fence mount at the side of the court, or have a friend film you. Side view shows contact point, racket path, and follow-through most clearly. Behind the baseline also works for court position and recovery.

- **Full body in frame** — shoes, shoulders, racket, ball contact, and the finish should all stay visible. Don't zoom.
- **30–60 seconds of swings is plenty.** Film longer if you like — you'll trim to the best part in the app.
- **Use 60fps if your camera offers it** — fast serves and rallies keep twice the detail at contact. (Slow-motion modes aren't needed.)
- **Good light helps the AI** see timing, balance, and contact.

Side view · full body profile

Behind view · behind the baseline

Creator tip: film with your normal Camera app and import into AI Tennis Swing Coach — you keep clean raw footage for editing, and you can screen-record the app's analysis for the reveal moment.

03 Visual Coach — *instant feedback.*

Open the **Visual Coach** tab. It's 100% free, unlimited, fully on-device, and needs no account. Two ways to use it:

- **Live:** point the phone at the court while you play. A live AI skeleton tracks your body and racket, every swing gets a 0–100 score, and the coach speaks instant

cues out loud. Tap **REC** to record the session with the overlays baked in.

- **Replay:** load the video you filmed. You get the skeleton frame by frame, a score for every swing, red fault cues at the moment they happen, racket and ball trails, slow-motion, and frame-step buttons.

The **Trails** button controls the racket swing trail and the ball comet; **Loop** replays one swing on repeat; the **swing / frame** buttons jump between detected swings and single frames.

Visual Coach tab · two ways to train: analyze a recording with Replay, or start a Live session — both run 100% on-device.

Live mode · point the phone at the court: real-time tracking (~30 FPS) with joint angles at the bottom, a 0–100 score per swing, and spoken cues the moment you finish the stroke.

Replay mode · each swing scored against pro benchmarks (elbow, knee, racket speed, timing), with the Video / Coach / Trails / Loop chips and swing- and frame-step buttons below.

After a replay, a **Practice Report** sums up the session — keep it to History or discard it. You can also tune how the coach talks to you (detail level, encouraging vs. direct tone, and focus areas like technique, power, spin, or footwork) right on the Visual Coach tab, and open the **AI Coaching** summary for a written breakdown of what's working and your top priorities.

Practice Report · the session at a glance: overall score, every swing charted, best & toughest swing, forehand/backhand averages — keep it or discard it.

Tune your coach · choose quick tips or deep dives, an encouraging or direct tone, and focus areas like technique, power, spin, or footwork.

AI Coaching summary · a written session breakdown: what's working, top priorities, and specific timestamps to review.

04 Deep AI *analysis*.

1. Open the **Analyze** tab and import your video (or record right there).
2. **Trim** to the cleanest 20–90 seconds — the best swings, not the whole session.
3. Pick the stroke — **Forehand, Backhand, Serve, Volley**, and more — or use **Auto Detect** for mixed play.
4. Choose the analysis depth and run it.

Coach setup · pick Quick Coach, Deep Review, or Elite Coach — your player and remaining AI credits show right above.

Technique & level · pick the stroke or let Auto Detect find it, then set your player level so the coach tunes checkpoints and drills to you.

Video source · record right there, or import from Photos or Files — your clip previews below once selected.

Trim · drag the green range to the best swings and fine-tune start/end down to the frame before uploading.

Run it · the analysis takes well under a minute — progress shows right on screen.

Instant result · your score, preview cues with timestamps, and one practical Fix of the Day — saved to History automatically.

Mode	Credits	What you get
Quick Coach	1	Fast read with one clear fix
Deep Review	2	Fuller breakdown across your swing phases
Elite Coach	3	The deepest report — detailed checkpoints, level estimate, training plan

Free accounts include **3 AI credits**; **Pro includes 100 credits monthly** plus longer clips. Every report includes 0–100 scores, an NTRP-style level estimate, visual checkpoints with timestamps, key frames from your actual swing, and one practical **Fix of the Day**.

Inside the report — here's a real Elite Coach analysis of a professional forehand, the same one behind the sample PDF above. Open the analysis and scroll through everything the coach found:

Swing Sequence · key frames pulled from your actual swing — Ready, Unit Turn, Racket Drop...

...through the finish · Contact, Follow-through, and Recovery — every frame timestamped to the hundredth of a second.

Visual Checkpoints · annotated frames with a color legend: white = your swing, yellow = the target, green = the correction to try.

Mechanics Details ·

Preparation and Timing scored against your level's target, with what the AI saw at the exact timestamp and why it matters.

Every mechanic gets its own read · here Contact Point 97 and Kinetic Chain 98, each with the why behind the number.

Balance & Follow-through · even strengths get refinement notes, plus the estimated point impact of each fix.

Level estimate · an NTRP-style rating with confidence — here a professional-caliber forehand rated 95 — plus a written summary of why.

This Week · the focus, a named drill with sets and reps, a live-ball practice rule, and a retest step to prove the fix.

Today's Snapshot · biggest win, biggest weakness, the focus for this week — and the Fastest Improvement Opportunity with the projected score if you land it.

Checkpoint detail · every checkpoint gets its annotated frame, the coach's read on it, and a Play checkpoint button to watch that exact moment.

05 Export & share.

- **PDF report:** every analysis is saved in **History** — open one and tap the **PDF** button at the top to save or share the full coaching report. (See a [real sample report](#).)

- **Share clips:** export clean slow-motion swing clips, or split-screen before/after clips of your progress (Progress tab → Create Before / After clip).
- **Track progress:** the **Progress** tab keeps score trends, personal bests, and milestones per player — use the same camera angle each week for the cleanest comparison.

Open analysis · the share, PDF, and delete buttons sit at the top of every report — one tap to export the full coaching report.

History · every saved analysis with its score, main fix, and share / PDF / delete shortcuts right on the card.

Score Progress · your scores charted toward the next milestone — same camera angle each week gives the cleanest proof.

Training plan · baseline rating, level progress, and your latest report as a tappable training card.

Stat tiles · current rating, highest baseline, clips this week, and your active-weeks streak at a glance.

Before / After · first session vs. now, per mechanic — and Create Before / After clip exports a split-sngle video of your progress.

This Week · the coach focus, the top 3 things holding you back, and your drills checked off as you go.

06 If something's *not working*.

- **"It won't analyze my strokes"** — check the four usual causes: the player isn't fully in frame · the video is zoomed in too far · the clip wasn't trimmed to actual swings · you're not signed in (the AI analysis needs the one-tap Sign in with Apple).
- **No swing trail showing** — tap **Trails** in Visual Coach and check the Swing toggle; the trail appears only on real strikes, and only when the player is large enough in

frame to track reliably.

- **Scores feel off on fast serves** — film at 60fps and from the side; motion blur at 30fps hides the contact moment.
- **Multiple people in frame** — the AI follows the most prominent player; film solo drills for the cleanest results.
- Still stuck? Email support@novadevcodestudio.com — we answer fast.

AI feedback is coaching guidance only — it can be inaccurate or incomplete and is not medical advice, a certified rating, or a guaranteed result.
